DETAILED ACTION

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless -

- (b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.
- 2. Claims 1-2 and 4-11 are rejected under 35 U.S.C. 102(b) as being anticipated by Noguchi (US 6,005,270).
- 3. Regarding claims 1-2 and 4, Noguchi discloses a final product that is a thin film transistor comprising polysilicon (see Fig. 1; 31B), a charge storage region (Fig. 1; 22a, 32a, 33a), wherein the charge storage region is ONO-type (Fig. 1; 23a), and that the charge storage region comprises a floating gate (Fig. 1; 32a).
- 4. Regarding claims 5-7, Noguchi discloses an end product that is a monolithic memory array comprising memory cells and these memory cells comprising TFTs comprising polysilicon (Fig. 3A). The process is immaterial because the end product is a memory array.
- 5. Regarding claims 8-11, Noguchi discloses a thin film transistor comprising a channel region (Fig. 3A-B), a charge storage region (Fig. 1; 22a, 32a, 23a, 33a), wherein the charge storage region is ONO-type (Fig. 1; 23a), and that the charge storage region comprises a floating gate (Fig. 1; 32a).

Claim Rejections - 35 USC § 103

6. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.

The factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.
- 7. Claim 3 is rejected under 35 U.S.C. 103(a) as being unpatentable over Noguchi (US 6,005,270) in view of Walker (US 6,593,624). Noguchi discloses a charge storage region (Fig. 1; 22a, 32a, 23a, 33a) but fails to disclose that the charge storage region is ONO-type. Walker, however, does disclose an ONO charge storage region (76). It would have been obvious to one skilled in the art at the time of the invention to incorporate the charge storage region of Walker with Noguchi for the advantage that the charge is stored independently in the traps. A leaky path in the tunnel dielectric cannot lead to fully charge loss.

Response to Amendment

8. Applicant's arguments filed February 28, 2006 have been fully considered but they are not persuasive. Since each invention must be evaluated **as claimed** the claimed invention, as a whole, does not overcome the examiner's rejection of a product by process limitation.

Product by process limitation:

Note that a "product by process" claim is directed to the product per se, no matter how actually made, In re Hirao, 190 USPQ 15 at 17 (footnote 3). See also In re Brown, 173 USPQ 685; In re Luck, 177 USPQ 523; In re Fessmann, 180 USPQ 324; In re Avery, 186 USPQ 161; In re Marosi et al., 218 USPQ 289; and particularly In re Thorpe, 227 USPQ 964, all of which make it clear that it is the patentability of the final product per se which must be determined in a "product by process" claim, and not the patentability of the process, and that an old or obvious product produced by a new method is not patentable as a product, whether claimed in "product by process" claims or not. Note that applicant has the burden of proof in such cases, as the above case law makes clear.

Conclusion

9. Any inquiry concerning this communication or earlier communications from the examiner should be directed to Deloris Bryant whose telephone number is (571) 272-8670. The examiner can normally be reached on M-F 7:30-4:00.

Art Unit: 2813

If attempts to reach the examiner by telephone are unsuccessful, the examiner's supervisor, Carl Whitehead can be reached on (571) 272-1702. The fax phone number for the organization where this application or proceeding is assigned is 571-273-8300.

Information regarding the status of an application may be obtained from the Patent Application Information Retrieval (PAIR) system. Status information for published applications may be obtained from either Private PAIR or Public PAIR. Status information for unpublished applications is available through Private PAIR only. For more information about the PAIR system, see http://pair-direct.uspto.gov. Should you have questions on access to the Private PAIR system, contact the Electronic Business Center (EBC) at 866-217-9197 (toll-free).
